Complete & Partial Solutions to Detection

Complete measurement systems: 6 projects

- ▶ Systems that include:
 - 1) Methane emission sensing
 - 2) Leak rate characterization and data analytics
 - 3) Provisions for data quality control
 - 4) Digital communication
 - 5) Enhanced functionality

Palo Alto, CA

Andover, MA

Redwood City, CA

Bozeman, MT

Yorktown Heights, NY

Houston, TX

Partial measurement systems: 5 projects

- ▶ Nascent technologies that may be too early in the development process for incorporation into a complete system
- ▶ Could significantly contribute to meeting system-level objectives
- ▶ Primarily envisioned as advances in detector technology or data analytics

Miniature, High Accuracy Tunable Laser Spectrometer for CH₄/C₂H₆ Leak Detection

PROJECT HIGHLIGHTS

- ▶ Enables ppb/s sensitivity via simple and robust direct absorption spectroscopy
- ▶ Uniquely discriminates biogenic vs. thermogenic emissions
- ▶ Analyzer core is 2.9l volume, 1.5kg w/pump @12W total power consumption
- ▶ Rackmounted and handheld early units are available now
- ▶ Compatible with other industry applications that require high accuracy, real-time analyses (e.g. mobile applications)

AWARD AMOUNT: \$2.4 million

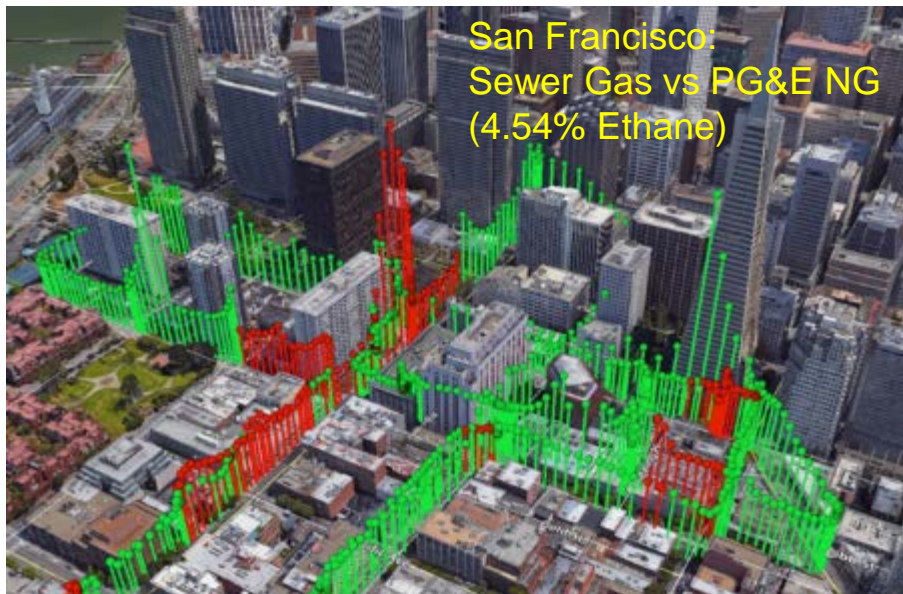

PROJECT PARTNERS: Los Alamos National Laboratory, Rice University

Miniature, High Accuracy Tunable Laser Spectrometer for CH₄/C₂H₆ Leak Detection

Thermogenic Methane:

- Vehicle samples taken while driving Red indicates correlated CH₄ + C₂H₆

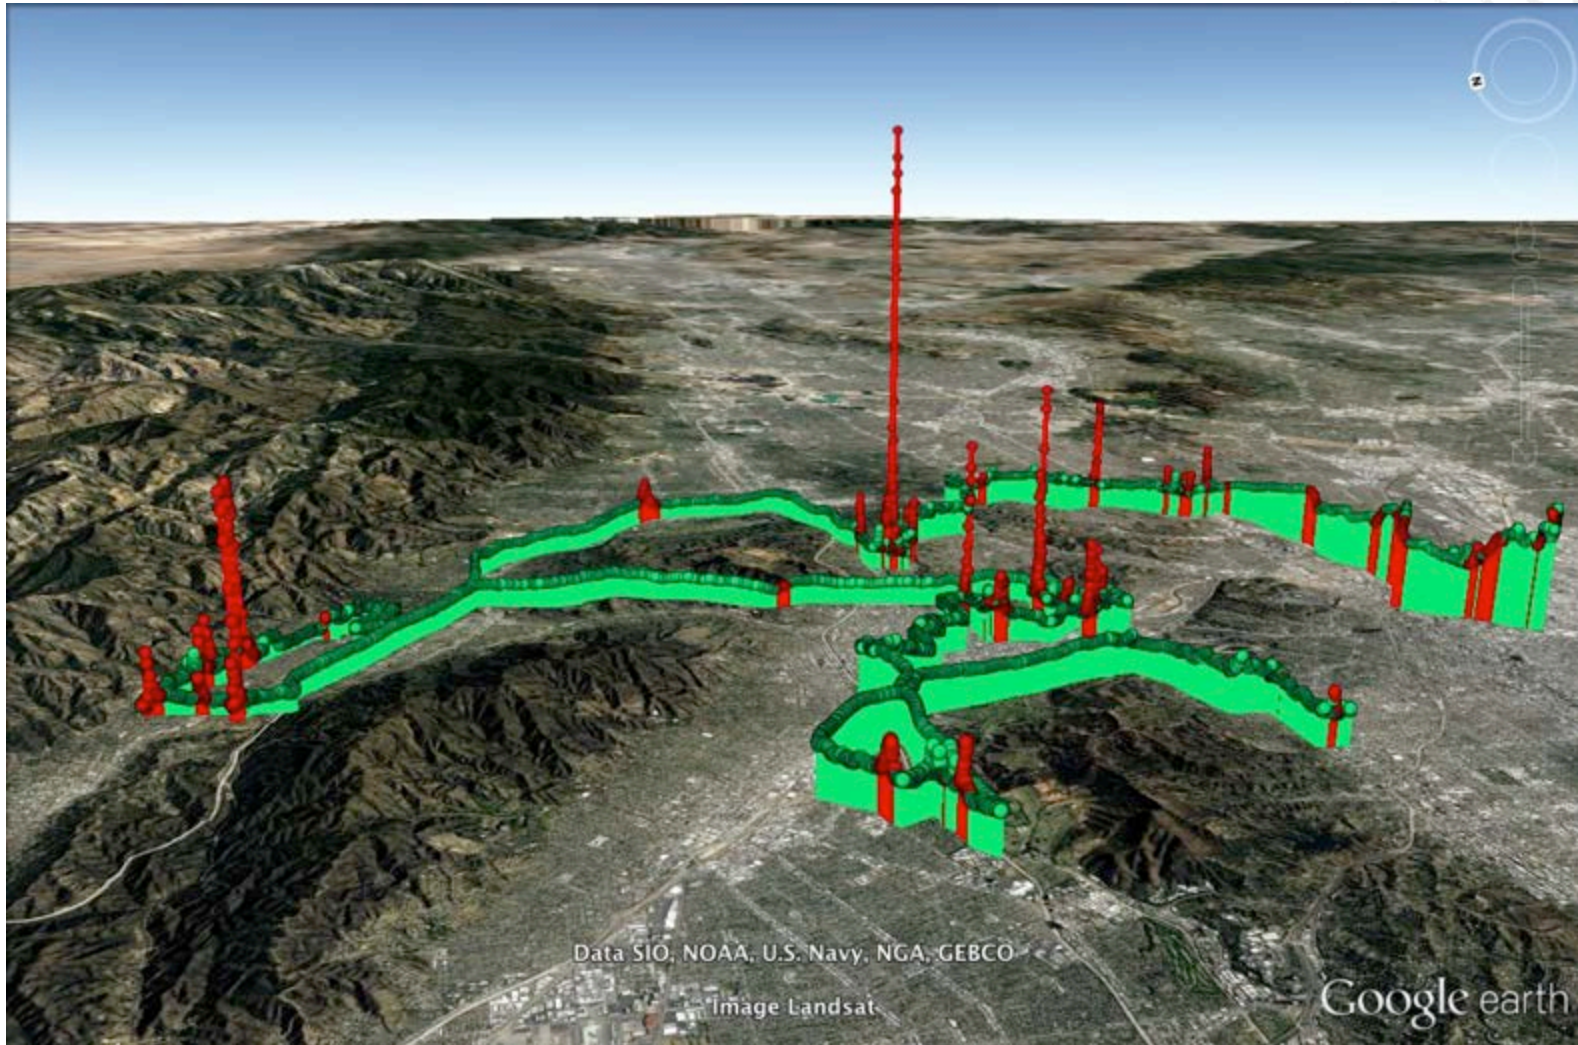

Biogenic Methane:

- Office Buildings located on former landfill
- Green= methane only; no ethane

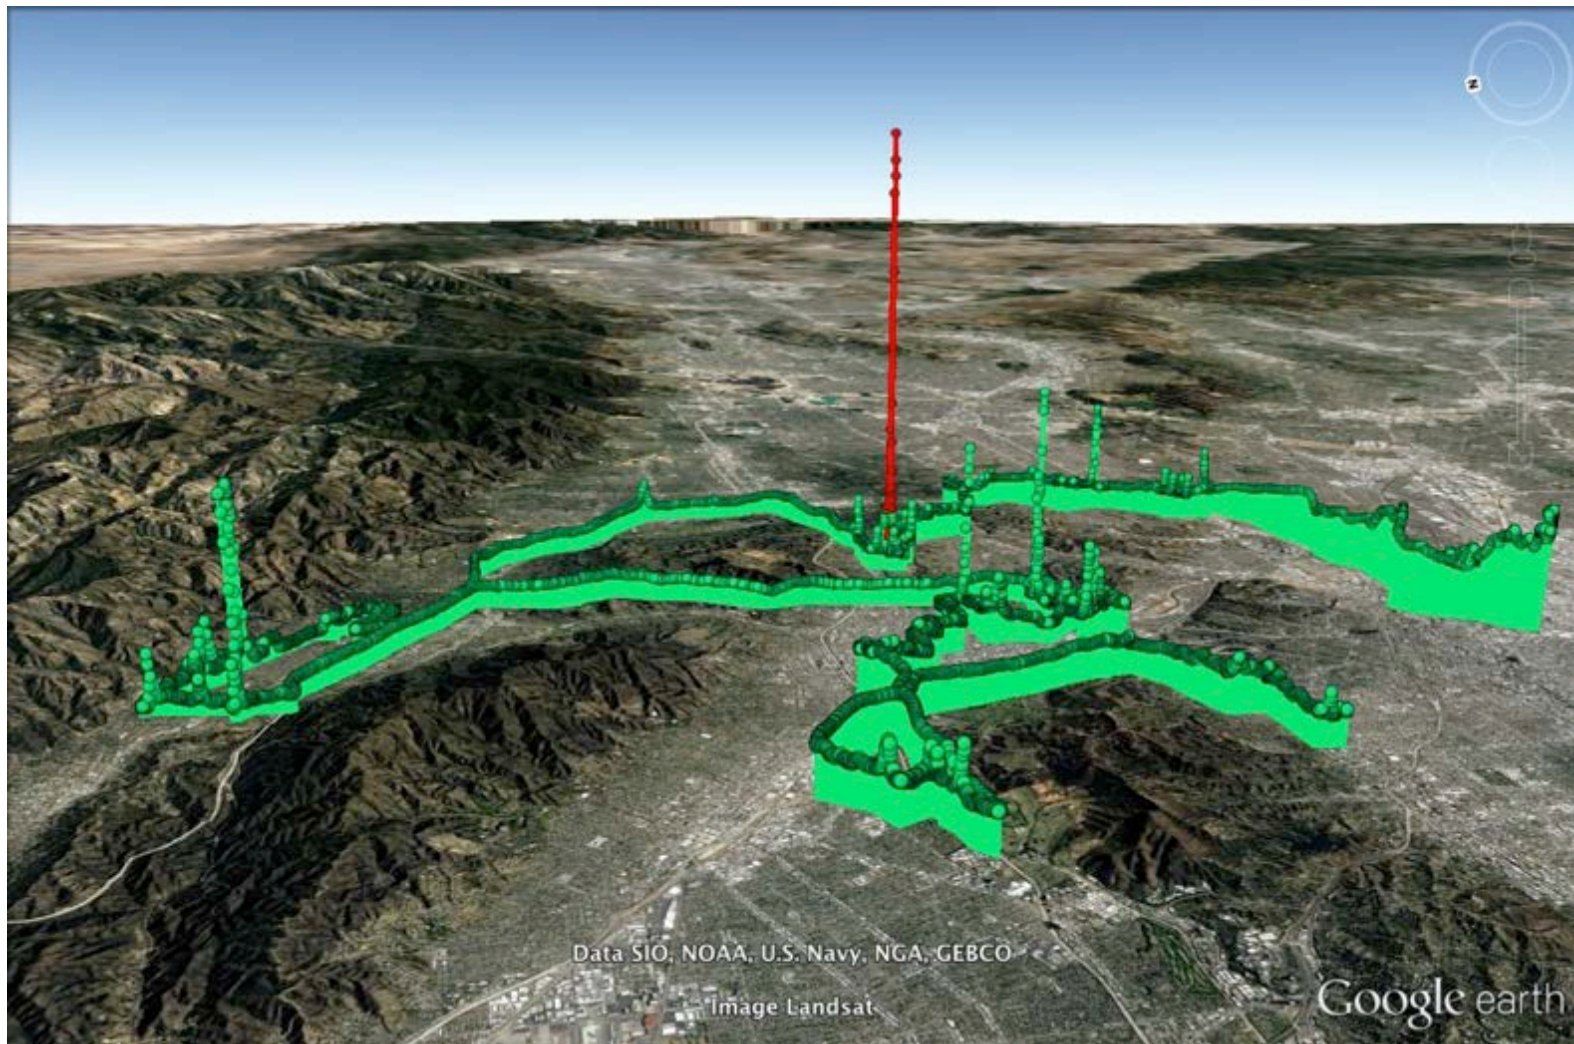

Aeris MIRA Pico Mobile LDS: Ethane/Methane 2 dozen+ NG leaks detected with 99%+ confidence

Aeris ethane/methane vs. simulated LGR/Picarro:

Only 1 correlation detected (vs. 28 w/Aeris Pico Mobile LDS)

Laser Spectroscopic Point Sensor for Methane Leak Detection

PROJECT HIGHLIGHTS

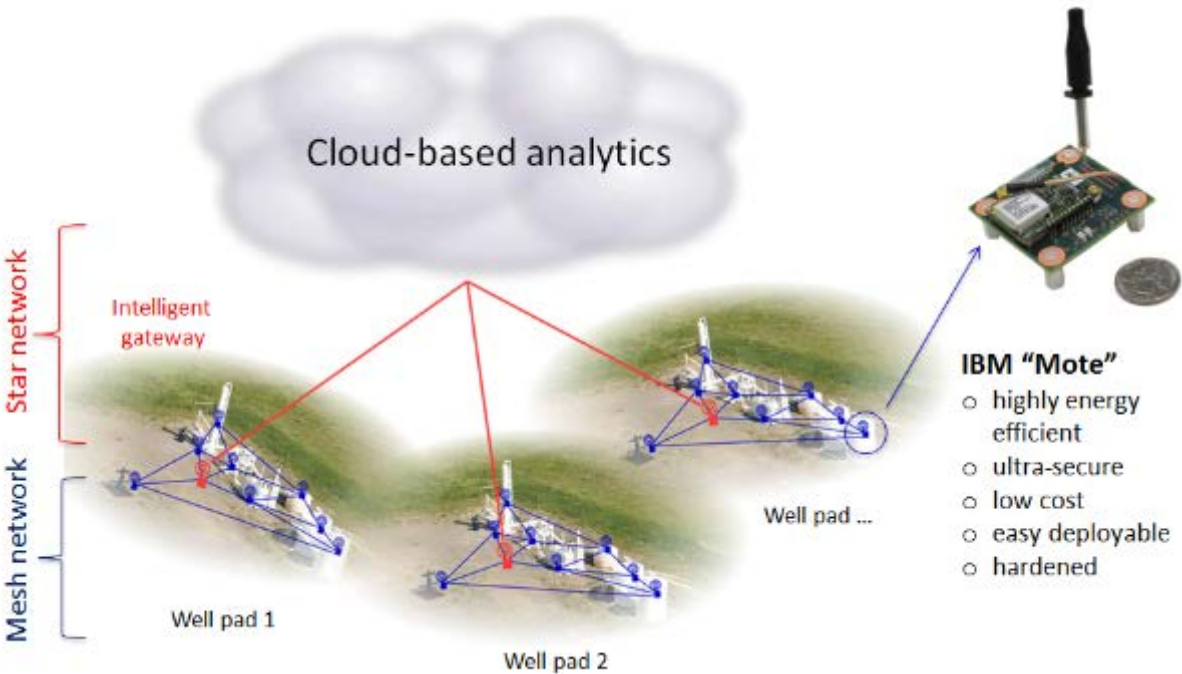

- ▶ Performance of state of the art cavity-based point sensors at reduced cost
- ▶ High sensitivity, selectivity, and stability measurements with low maintenance
- ▶ Closed path instrument is weather-proof, high-performance, and low power consumption
- ▶ Suitable for continuous or intermittent stationary and mobile applications
- ▶ Advanced spectral models and high instrument stability allow unattended operation
- ▶ Advanced manufacturing and novel design/alignment enable cost reductions

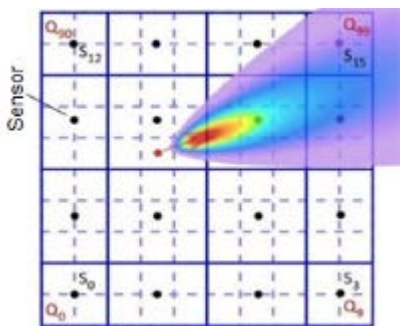

AWARD AMOUNT: \$2.85 million

PROJECT PARTNERS: Colorado State University, Gener8

On-Chip Optical Sensors and Distributed Mesh Networks for Methane Leak Detection

- PROJECT HIGHLIGHTS**
- ▶ Developing novel, low cost, on-chip optical sensors with high methane selectivity
 - ▶ Distributed and modular system with self-organizing network of low-power motes
 - ▶ State of the art silicon photonics technology for on-chip TDLAS
 - ▶ Allows for selectivity to molecule of choice
 - ▶ Orders of magnitude lower cost (\$250/sensor target)
 - ▶ Low power consumption (<1 Watt)
 - ▶ Cloud-based analytics for source detection and localization

AWARD AMOUNT: \$4.5 million

PROJECT PARTNERS: Princeton University, Harvard University, Southwestern Energy

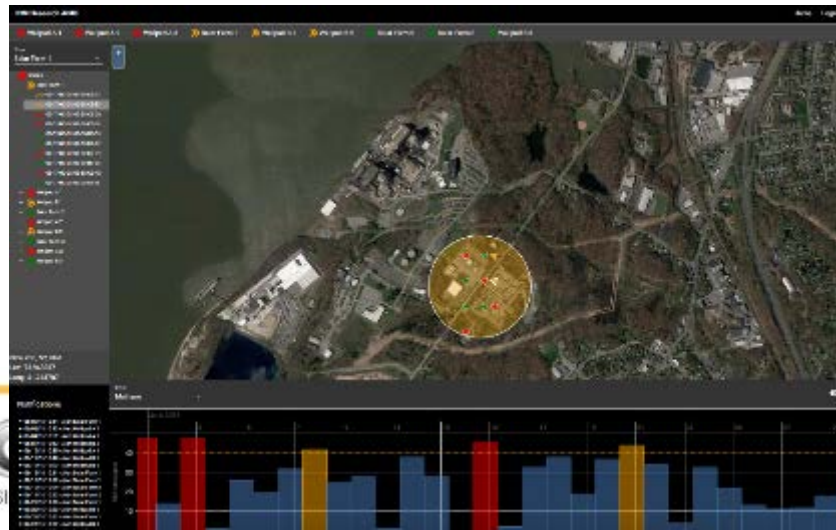

On-Chip Optical Sensors and Distributed Mesh Networks for Methane Leak Detection

base station wind sensors methane sensors

IBM AIMS methane sensing system:
solar powered
low power mesh radio connectivity
ppm sensitivity

Printed Carbon Nanotube Sensors for Methane Leak Detection

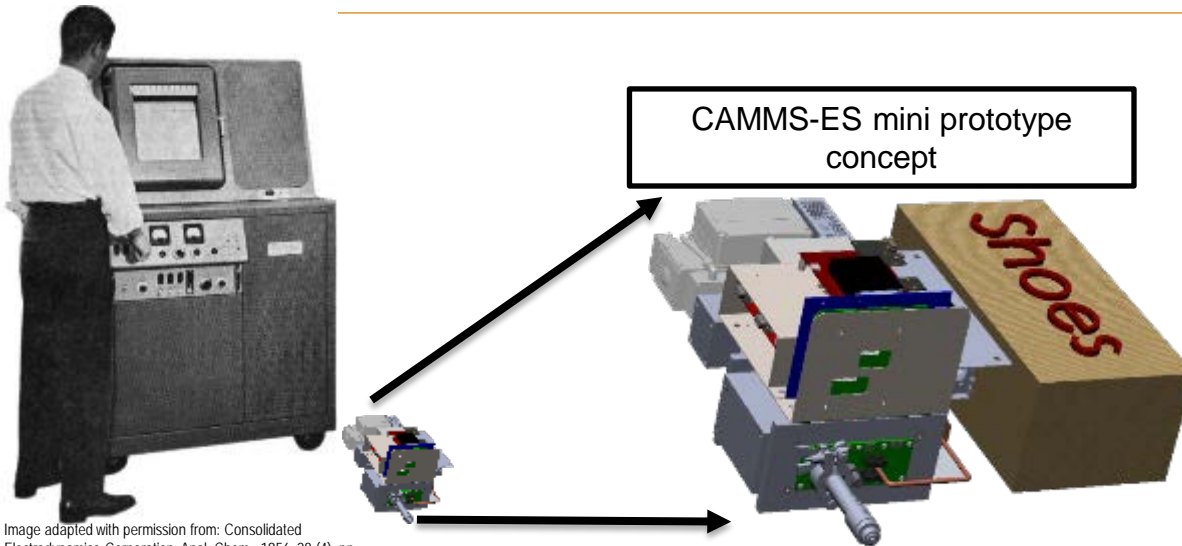

PROJECT HIGHLIGHTS

- ▶ Developing a mesh network of ultra-low-cost printed sensor arrays that can detect multiple gases
- ▶ Uses scalable low-cost, additive printing methods to print chemical sensor arrays based on modified carbon nanotubes
- ▶ Sensor elements with different responses to methane, ethane, propane and other wellhead gases
- ▶ Total system costs under \$350 per site per year
- ▶ Wellpad, pipelines and refineries
- ▶ Sub-ppm sensitivity with leak localization within 1 m

AWARD AMOUNT: \$3.4 million

PROJECT PARTNERS: NASA Ames
Research Center, BP, Xerox Corporation

Coded Aperture Miniature Mass Spectrometer for Methane Sensing

CAMMS-ES mini prototype concept

- ### PROJECT HIGHLIGHTS
- ▶ Miniaturizing a mass spectrometer utilizing microfabrication and aperture coding
 - ▶ High selectivity measurements at short detection times for methane as well as VOC's (such as benzene, C₂-C₇)
 - ▶ Capable of thermogenic vs. biogenic differentiation
 - ▶ Examining fence line monitoring at refineries and gas processing facilities

Frequency Comb-based Methane Sensing Spectroscopy

Monitor 100s of sites from a central location. Clients are charged an annual fee for monitoring.

- Large cost reduction over proof-of-concept

PROJECT HIGHLIGHTS

- ▶ High sensitivity (ppb-m) Regional laser frequency-comb absorption measurements over kilometer paths with inversion techniques
- ▶ Ability to monitor 100's of sites from a central location with thermogenic-biogenic differentiation
- ▶ Simplifying design to reduce the cost of phase locked dual comb spectroscopy
- ▶ Multispecies sensing includes CH_4 , $^{13}\text{CH}_4$, C_2H_6 , H_2O , CO_2 , and propane
- ▶ Coupled to large eddy dispersion modeling to provide localization

AWARD AMOUNT: \$2.1 million

PROJECT PARTNERS: NIST, NOAA

Frequency Comb-based Methane Sensing

Distributed Gas Sensor Using Hollow Core Fiber

PROJECT HIGHLIGHTS

- ▶ Modified tube + hollow core fiber sensing system in a design that can span over 100km and offer continuous pipeline monitoring
- ▶ Broadly applicable throughout the oil and gas industry, particularly for large-scale infrastructure (such as gathering lines and storage facilities)
- ▶ Near IR absorption enables remote TDLAS through standard telecom while leveraging conventional tube sensing

AWARD AMOUNT: \$1.4 million

PROJECT PARTNERS: Virginia Tech

Portfolio: Two Aerial Technologies

AERIAL

FIXED

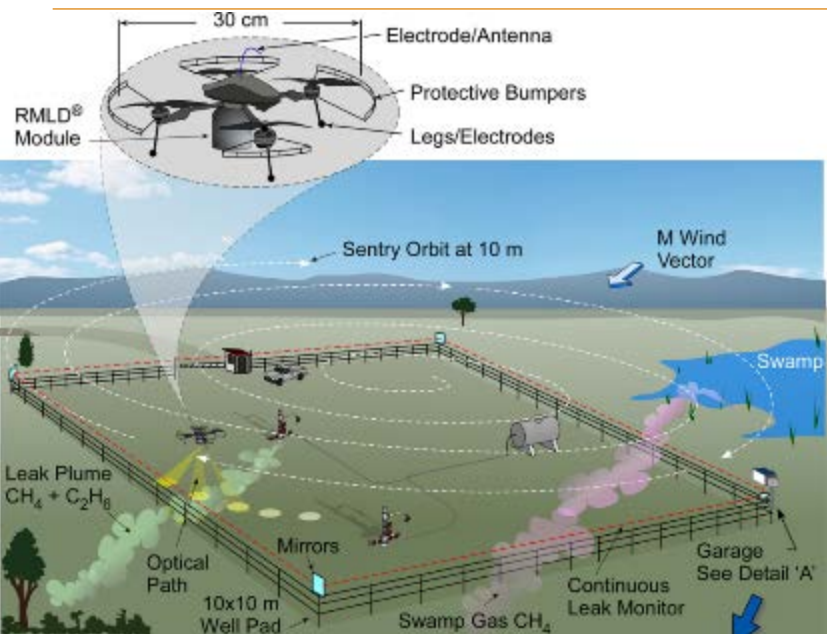

MOBILE

ENABLING

UAV-based Laser Spectroscopy for Methane Leak Measurement

- ### PROJECT HIGHLIGHTS
- ▶ Continuous leak monitoring with leak quantification and real-time alarm notification
 - ▶ Two modes of operation: continuous perimeter monitoring and search mode to pinpoint leak location
 - ▶ Speciation of methane and ethane differentiates thermogenic vs. biogenic emission
 - ▶ Improved production processes reduce costs of mid-IR Interband Cascade Laser (ICL) sources

AWARD AMOUNT: \$2.9 million
PROJECT PARTNERS: Heath Consultants, Thorlabs, Princeton University, University of Houston, Cascodium

UAV-based Laser Spectroscopy for Methane Leak Measurement

Mobile LiDAR Sensors for Methane Leak Detection

UAV sensor

Manned aircraft sensor

Data From Buried Pipeline Emissions Test

PROJECT HIGHLIGHTS

- ▶ Simultaneous, rapid, and precise 3D topography and methane gas sensing on fixed or mobile platform
- ▶ Produces detailed situational awareness reports derived from overlaid methane concentration, 3D topography, and RGB picture data
- ▶ UAV and manned aircraft platforms targeting well pads and pipelines
- ▶ Capable of covering a broad range: a frequency-swept laser beam is transmitted to a topographical target 1-300 m from the sensor
- ▶ Sensitivities from 5ppm-m and measurements from up to altitudes of 1000 ft

AWARD AMOUNT: \$1.5 million

Mobile LiDAR Sensors for Methane Leak Detection

Mobile LiDAR Sensors for Methane Leak Detection

› Sensor status

- Gimbal sensor for fixed position monitoring is operational
- Telescoping mast provides downward-looking perspective and rapid deployment
- Real-time data streaming and processing for immediate results

Mobile LiDAR Sensors for Methane Leak Detection

Mobile LiDAR Sensors for Methane Leak Detection

› Results summary

- Detected and quantified 7 leaks in 2.5 hours
- Localized 6 of 7 to within 1 m
- Estimated 6 of 7 leak rates to within 50%

Leak #	Leak Location	Time	Detected?	Location Error (m)	Actual Rate (cuft/hr)*	Measured Rate (cuft/hr)	Rate Error (%)
1	Separator PRV vent	9:30	yes	1.6 m	7	10	43%
2	Separator burner controller	9:49	yes	1 m	12	21	75%
3	Storage tank vent	10:06	yes	0 m	11	10	-9%
4	Well head pneumatic valve	10:20	yes	0 m	10.5	13	24%
5	Well head pressure guage	10:40	yes	0 m	4	6	50%
6	Separator burner gas line	11:10	yes	0.4 m	9	8	-11%
7	Separator pneumatic valve	11:52	yes	0 m	11	8	-27%

* flow meter uncertainty: 1.5 cuft/hr

Portable Imaging Spectrometer for Methane Leak Detection

PROJECT HIGHLIGHTS

- ▶ Miniaturization of Rebellion's Gas Cloud Imager (GCI), a long-wave infrared imaging spectrometer: 7-14 μ m
- ▶ Camera will be lightweight and portable – the size of a Red Bull can - and capable of being incorporated into personal protective equipment
- ▶ Data processing uses cloud-based computing architecture that streams results to mobile device

AWARD AMOUNT: \$4.3 million

Tunable Mid-infrared Laser for Methane Sensing

PROJECT HIGHLIGHTS

- ▶ Innovative, low-cost mid-IR laser with VCSEL architecture
- ▶ Integrated micro-electro-mechanical system (MEMS) mirror enables a wide tuning range
- ▶ Approximately 40x reduction in laser cost, applicable across a wide array of sensors and applications

AWARD AMOUNT: \$1.9 million
